Competitors and growth moves for Trivense, Rasoi, and ATSResume

India market · all three products on one page. Improvements must lift both users and revenue. Source: product-competitors canvas · Sep 2026.

9
Trivense split / trip apps

8
Rasoi recipe / pantry apps

8
ATSResume score / builder tools

Where you sit

Your product	Category	Hardest rivals	Your wedge
Trivense	Group expense split	Splitwise + Splitkaro	Trip boards + INR pricing; UPI settle still missing
Rasoi	Indian recipes + pantry	Sanjeev Kapoor + Cookpad	Regional pantry match + Blinkit/Zepto checkout
ATSResume	ATS score + job kit	Jobscan + ATSAlign	Pay per application from ₹69, not a monthly SaaS

Competitor lists

High = same job-to-be-done and already in users' habits. Medium = overlapping product, weaker India fit. Adjacent = they own a step in the journey (pay, grocery, LinkedIn) rather than the whole product.

Trivense

You compete with split apps, not personal budget apps. India in 2026 is splitting into UPI-native tools vs Splitwise's global graph. Live: trivense.vercel.app

Competitor	Type	Threat	Why they matter
Splitwise	Global default	High	Huge network; friends already on it. Weak UPI. Free tier now capped (~4–5 expenses/day). Pro ~₹999/yr.
Splitkaro	India split + food bills	High	Imports Swiggy/Zomato/Blinkit/Zepto. Premium ~₹450/yr. Closest India-native feature set.
The Hisaab	India free splitter	High	UPI-native, ads-free, no signup to view a group link. Direct attack on Splitwise for PGs and flats.
Niptao	UPI settle	High	Opens GPay/PhonePe with prefilled pay. Trivense still tracks then leaves settlement manual.
Settl	UPI + settle verify	Medium	Free, AI parse, settlement confirmation. Same trip/group job as Trivense.
Tricount	Trip splitter (EU)	Medium	Already in your Play listing research. Link-share without account. No UPI, weaker realtime.
Settle Up	Trip / group math	Medium	Polished offline sync. No India payments. Same "track then pay elsewhere" gap.
GPay / PhonePe split	Payments apps	Medium	Users already split inside the app they pay with. Hard to displace for 2–4 person dinners.
Wallet (BudgetBakers)	Personal finance	Low	In your competitor screenshot set. More budgeting than group trips.

Rasoi

You compete with chef brands, community recipe apps, and YouTube — plus grocery apps at checkout time. Live: rasoiapplication.in

Competitor	Type	Threat	Why they matter
Sanjeev Kapoor Recipes	Chef brand + fridge AI	High	“What’s in my fridge”, Jain/veg filters, cook-along timers. Chef trust is the hardest brand wall.
Cookpad	Community recipes	High	Ingredient/pantry search, huge library, ads-free core. Global, not India-first grocery links.
Nisha Madhulika	Hindi vegetarian	High	Default for Hindi veg home cooking. Video-led. Weak pantry match vs Rasoi.
Tarla Dalal	Cookbook archive	Medium	17k+ recipes, health filters, household name. App is dated vs pantry + delivery hops.
Archana's Kitchen	Regional Indian	Medium	Strong state-cuisine filters, veg/non-veg, meal plans. Overlaps Rasoi’s regional story.
Yum Recipes	Video recipes (PK)	Medium	Hindi/English videos, veg hide, nutrition. Ad-heavy discovery app.
YouTube chefs	Video, not an app	High	Ranveer Brar, Kabita’s Kitchen, etc. Where people actually learn a dish. Rasoi must win “tonight” not “watch later”.
Blinkit / Zepto / Instamart	Grocery, not recipes	Adjacent	Partners and rivals. They own “what to buy”; Rasoi Plus rides their checkout.

ATSResume

You compete with USD ATS scanners, India free checkers, and Naukri’s own score. Your wedge is pay-per-job, not a monthly seat. Live: getresumescore.in

Competitor	Type	Threat	Why they matter
Jobscan	Global ATS score	High	Category leader. 5 free scans/month, ~$50/mo. Weak INR and Naukri language.
ATSAlign	India ATS checker	High	Unlimited free score, Naukri/LinkedIn/Internshala, INR. Closest India web competitor.
Rezup	INR pay-as-you-go	High	Free score + AI credits from ₹1. Same “no subscription” pitch as getresumescore.in.
Naukri Resume Score	Incumbent job board	High	Built into where people apply. Scores completeness, not JD match — you can beat it on job-specific keywords.
StepUpCareer	Career suite	Medium	ATS check + mocks + referrals. ₹499–₹1,199/mo ecosystem vs your per-kit packs.
ResumeWorded	LinkedIn + resume	Medium	Strong writing feedback. 1 free scan. USD pricing, US recruiter bias.
Rezi / Kickresume / Enhancv	AI builders	Medium	Pretty templates + AI rewrite. Subscriptions. Not India JD-first.
LinkedIn Premium	Profile, not PDF	Adjacent	Where hiring happens. Complements rather than replaces a Naukri PDF kit.

Gaps vs this set

Product	Priority	Implication
Trivense	Must ship	One-tap UPI settle (GPay/PhonePe). Without it, Niptao/Hisaab/Settl win the last mile.
Trivense	Nice	Swiggy/Zomato bill import (Splitkaro’s hook) and no-signup view links (Tricount/Hisaab).

Product	Priority	Implication
Rasoi	Must keep	Pantry % match + regional filters + partner grocery links. That combo is rare.
Rasoi	Watch	Sanjeev Kapoor fridge AI and Cookpad community photos will out-content a static catalog.
ATSResume	Must keep	JD-specific score for free, then ₹69 kit (resume + cover + LinkedIn + interview).
ATSResume	Watch	ATSAlign unlimited-free and Rezup ₹1 credits undercut “pay to generate” if quality is close.

Not the same fight

Do not treat Wallet, Yummly, or LinkedIn Premium as peer-for-peer replacements. Splitwise/Splitkaro, Sanjeev Kapoor/Cookpad, and Jobscan/ATSAlign/Naukri are the ones that steal the same “open this to finish tonight’s job” moment.

Improvements that grow users and revenue

Every row must move both sides: more people finishing the job, and a clearer moment to pay (Premium / Plus / application pack) or a second line (ads, affiliates, sponsors).

Trivense — ship first

UPI settle + no-signup board link + Splitwise import. That triangle grows groups and makes Premium (unlimited sharing, ad-free, unlimited settle) obvious.

Pri	Improvement	Users	Revenue
P0	One-tap UPI settle	Users finish “who owes whom” in-app (GPay / PhonePe / Paytm deeplink + UPI ID copy).	Free: 1 settle/day with ads. Premium = unlimited settle + reminders. This is the feature Niptao/Hisaab use to steal Splitwise users.
P0	Join / view board with no signup	Share a link; friends see balances in browser or Play, then create an account to add expenses.	Viral loop like Tricount/Hisaab. Every unpaid guest is a future Free user; 2nd shared board is the Premium paywall.
P0	Splitwise / CSV import	Let a whole trip crew switch in one tap instead of re-typing history.	Acquisition from Splitwise’s 2026 free-tier caps. Prompt Premium after import if they have >1 shared board.
P1	Swiggy / Zomato / Blinkit bill import	Trip food bills land as expenses without typing — Splitkaro’s hook.	Free: 3 imports/month. Premium unlimited. High-intent groups (food-heavy trips) convert faster.
P1	WhatsApp “who owes whom” card	Share a clean settle image/text into the trip WhatsApp group (where the real conversation lives).	Each share is an invite. Deep link to Play with referral code you already support.
P1	Settle confirmation	Payer taps Paid, receiver confirms — Settl’s trust feature. Cuts “I already paid you” fights.	Keeps groups alive longer → more ad impressions on Free, more reason to stay on Premium.
P1	Market Splitwise’s new limits	Play / website copy: unlimited personal boards + 1 shared board free; no daily expense cap.	Steal search (“Splitwise alternative India”) while they paywall basics. Convert sharing-heavy groups to ₹299/mo.
P1	Custom domain + iOS waitlist	Make trivense.app the canonical site; waitlist email when iOS opens.	Trust + SEO users. Email list is a launch-day conversion channel for Premium trials.

Pri	Improvement	Users	Revenue
P2	Referral that pays both sides	Inviter and invitee get 7 days Premium when the friend logs first expense on a shared board.	Paid users recruit groups (highest LTV). You already have referral + Play referrer URLs — wire the reward.
P2	Trip mode vs roommate mode	Onboarding: Trip (dates, settle at end) vs PG/flat (recurring rent). GPay wins dinners; you win 5+ person trips.	Clearer job → higher D1 retention. Yearly Premium (₹2,499) sold as “this year’s trips”.

Rasoi — ship first

Pantry-first home + Hindi + grocery CTA on missing ingredients. Users come for “aaj kya banaye”; rupees come from Plus checkout and sponsors.

Pri	Improvement	Users	Revenue
P0	Tonight = pantry match as home	First screen: “cook this with what you have” ranked by match %, not a generic feed.	Beats recipe-catalog apps. Plus CTA on missing 1–2 ingredients → Blinkit/Zepto (affiliate + subscription).
P0	Hindi UI + Hindi dish names	Nisha Madhulika owns Hindi veg. Ship hi-IN strings and search (“आज क्या बनाएं”, dal tadka).	Play Store India ranking + older home-cook segment. More actives → more Plus trials and sponsor impressions.
P0	Grocery checkout as the Plus moment	On a 70%+ match recipe, one button: “Buy missing on Blinkit”. Trial users who tap this convert.	Affiliate on tap + Rasoi Plus (₹49/mo, ₹499/yr). This is your Sanjeev Kapoor fridge-AI counter without a chef brand.
P1	Cook-along timers, screen awake	Step timers like Sanjeev Kapoor. Users stay in-app while cooking instead of bouncing to YouTube.	Session length up (ads on Free after trial). Plus: no ads during cook-along so they pay to keep cooking clean.
P1	“I cooked this” photos	Cookpad’s community loop. Optional, moderated. Show 3 real plates on each recipe.	UGC content you cannot buy. Social proof → more installs from shares; sponsor slots worth more CPMs.
P1	WhatsApp recipe card	Share “Paneer Butter Masala · 25 min · 80% pantry match” with Play / web link.	Cheapest user acquisition. UTM + invite: “both get 7 extra Plus trial days”.
P1	Festival packs	Navratri / Diwali / Eid / Pongal collections with Jain / veg / meat filters baked in.	Seasonal spikes in users. Sponsors pay for festive Home/Recipes placements; Plus trial push in the pack.
P1	Sell sponsorship as a product	You already have placements (Home, Recipes, Pantry, Saved, detail). Package 3 screens × 4 weeks.	Second revenue line besides Plus. Brands pay for dinner-planning inventory grocery apps cannot sell as recipes.
P2	Exit open testing → production listing	Public Play listing is how Cookpad/SK get discovered. Open testing hides you from most search.	Organic user growth. More reviews → more Plus trials. Do this after pantry + Hindi are solid.
P2	Meal reminder → Plus	Evening nudge: “3 pantry matches tonight”. If they tap grocery, offer remaining trial days.	Reactivates dormant users. Reminder without Plus feels like ads; Plus is “reminders + checkout, no ads”.

ATSResume — ship first

Free JD score with no login, heatmap CTA into the five-pack, copy vs Naukri completeness. Users at the top; ₹69–₹249 when they actually apply.

Pri	Improvement	Users	Revenue
P0	Score without login, paywall the kit	Paste JD + resume → score + missing keywords free. Account only to save or generate the pack.	Matches ATSAlign top-of-funnel. You win on kit quality, not on locking the score. More scores = more ₹69 checkouts.
P0	Show the gap, then the pack	After score: “12 missing keywords · cover letter + tailored PDF fixes this”. CTA default = five-pack ₹249.	Conversion, not just users. Dual pack ₹119 as middle; never lead with monthly SaaS (that is Jobscan’s tax).
P0	Beat Naukri’s score in copy	Homepage: “Naukri scores completeness. We score this job description.” One screenshot of keyword heatmap.	Steals users already on Naukri. They still apply there; you sell the PDF they upload.
P1	Naukri / LinkedIn paste UX	One field: “Paste JD”. Optional Chrome extension later. Fresher vs experienced templates already exist — surface them.	Lower time-to-score → more daily actives. Each extra score is a pack opportunity the same week (campus season).
P1	Shareable score card	“72 → 89 ATS match for Flipkart SDE” image for WhatsApp/LinkedIn. Watermark getresumescore.in.	Viral users. Friend hits the same JD flow. Offer 1 bonus credit when their first pack pays.
P1	Do not race Rezup on ₹1 credits	Sell the full kit (resume + cover + LinkedIn + interview). Single credit = one company, one outcome.	Protects ARPU. If they want cheap rewrites, Rezup wins; you sell “ready to apply tonight”.
P1	Campus / fresher pack	₹119 for 2 internships or first jobs; template 08 already exists. Placement-season landing page.	New user cohort every Jul–Oct and Jan–Mar. Volume of 2-packs beats hunting Jobscan’s USD buyers.
P1	Failed generation = instant credit back (visible)	You already restore credits — show it on dashboard and in Razorpay failure emails.	Trust → repeat purchase. Cuts Razorpay disputes. Five-pack buyers are the ones who churn on one failed PDF.
P2	Same-profile, next company	After a kit: “Apply to a similar JD — 1 credit”. Saved profile, new paste.	Turns one payment into 2–5. This is how ₹249 five-packs actually get consumed instead of sitting unused.
P2	Placement-cell / college B2B later	Bulk credits for a TPO (100 kits). Not now — after the self-serve funnel converts.	High revenue only once getresumescore.in is the student default. Do not build this before P0 score-without-login.

What not to build next

Product	Skip for now	Why it fails the dual test
Trivense	Personal-finance Wallet clone (net worth, bank sync)	Users might grow; Premium does not. Splitwise/Splitkaro steal groups, not budgets.
Rasoi	UGC recipe upload marketplace like full Cookpad	Moderation cost with no Plus lift until pantry + Hindi + grocery CTA convert.
ATSResume	₹1 rewrite credits or a ₹199/month Pro plan	Users might tick up; ARPU dies vs Rezup/Jobscan. Kit-per-company is the wedge.
